6. Virtuelle Lehre

- 6.7) Weitere Anmerkungen zur virtuellen Lehre
- I think it is the best way to do this course, as we could hear from people living somewhere else
- Overall I liked that it was held online because of the flexibility that it provides for both students (specially PhDs) and lecturers. It was also nice that we could meet people that were not necessarily living in Innsbruck. However, it is true that having in person meetings always stirs conversation a little more and give a "warmer" atmosphere. To be honest, I do not know what is best. This is just a point that I always ask myself with fully virtual lectures.

7. Anmerkungen

- 7.1) Zur Verbesserung der LV möchte ich folgende Anregung geben...
- Even though the course was conceptualized around students from geology and atmospheric and earth sciences, it would be beneficial to open up the concept of the course to others, by for instance inviting externals from different fields. The second part of the course was a bit too much focussed on data scientists, which is not my field of expertise and will probably never be.
- I would encourage to have a space (OpenOlat, Slack). A lot of nice links and information were shared and it would be nice to have it somewhere (opposed to just leaving them in the zoom chat, where I think they just get lost). Maybe a share excel file where you can also add what the link it is about in a column or field of study, country, etc. It would be an easy "job links database".
- If possible, share a few sentence bios of the speakers in advance, it would make it easier to prepare questions before the sessions rather than "on the fly".
- The course was a great opportunity to open my horizons to career possibilities beyond academia. I was inspired and now I think I am less worried about the challenges I will face after my PhD.
- The last part of the discussion in small groups was not so clear. It was fine because we had nice conversations, but maybe something more structured would improve the quality of the discussion and all the groups would do something similar. This was already improved in the second day.
- 7.2) Gut gefallen hat mir bei dieser LV....
- Der direkte Austausch mit Personen, die bereits den akademischen Karriereweg durchlaufen und anschließend in andere Bereiche gewechselt sind. Außerdem fand ich es sehr interessant, CV dieser Personen zu sehen.
- I really appreciated all talks by the invited externals as well as their tips and learnings from their career paths. That concept was beneficial to all participants I guess.
- I think it had a really nice range of options on the topic, from senior scientist who change carrers to young scientist who went into interpernuership which I think was great to see all potential carrer paths we could follow outside of academia. I think it was a great seminar! I'm recommending it to other new PhD students!
- I think it was very well designed and planned. I loved that it was "short" (3 sessions) because it helps to fit it in the usually hectic PhD calendar. I also liked that each session was devoted to one specific career profile.
- It opened my mind and made me change my view of what can happen after the PhD. Presenters were really open to talk about everything and share their experience with us. Same for the organizers, who also shared some experiences from the academic perspective, which was also much appreciated.
- The multiple input of guest lecturer bring different vision of what I can do in the future
- The speakers had some amazing wisdom to share I would totally attend the course next year again if it's offered (especially if there are other speakers since I've already heard the personal stories of the ones from this lecture).
- the environment created by the lecturer was very open, respectful and constructive. The speakers invited by the lecturers presented interesting insights. I liked that we were flexible with time. No questions were not answered!
- ^{7.3)} Sonstige Anmerkungen zur LV...
- I liked the concept of the rooms where students share their view or show the result of their "homework". We did not manage to talk about our CV. Some questions were made to invited speakers about CV and we got useful insights. Next time I would maybe spend a bit more time on this and show examples: how a CV changes if sent to a company vs university.
- It was very encouraging and comforting to hear about the career paths and choices of other people one big thank you for organizing this!
- Thank you for organizing the course! It was great to hear their stories and I collected very useful tips for the future. I would recommend

it to all my colleagues

■ The course was really really good and I would advice it to anyone at any stage of the PhD, just for hearing out other people opinions. The invited guests were engaging and really interesting. Obviously, they were from the close network of the hosts, thus not topic-relevant for students in other subjects. Nevertheless, I am sure that this can be arranged and expanded by suggesting other guests in oneself area of research. Well done!
